15. If something looks off
16. Quick glossary

1. Welcome

Customer Pulse is where the whole team keeps track of customers — the calls the counter hears about, the visits salespeople make, the cases tech support works, and the leads managers hand out. Everything lives in one place, so nothing slips through the cracks and everyone can see what's happening.

You don't install anything. Open the web address in any browser — on your phone, tablet or computer — and sign in. It looks and works the same everywhere.

A quick promise: you can't really break anything. Poke around, tap things, open cards. If you're ever unsure, the worst that happens is you close a window and try again.

2. Signing in

You sign in as yourself with your work email and a password. Your account and role are set up for you by an admin (Kathleen), so if you can't get in, she's the person to ask.

First time in

1. Open the Customer Pulse web address (bookmark it — you'll use it daily).
2. Type your work email and the password you were given, then tap Sign in.
3. If you'd like to choose your own password, use “Forgot your password?” below the sign-in button.

Forgot your password?

1. On the sign-in screen, tap “Forgot your password?”.
2. Enter your work email. You'll get an email with a reset link.
3. Open the link, set a new password, and sign in with it.

Heads up: reset links are single-use and expire. If a link ever says it's expired, just request a fresh one from the same screen.

Signing out: tap Sign out in the top-right corner any time. The app remembers you between visits, so you usually won't need to sign in again each day.

3. Finding your way around

Two strips run across the top of every screen: the header (who you are and app-wide buttons) and the tabs (the main areas of the app).

The header

- **Customer Pulse** with a live/offline dot — green means you're connected.
- **The version pill ("v3.15 • What's new")** — tap it to see what's changed recently.
-  **Idea** — send an idea or report a problem any time (see section 14).
- **Preview as...** (admins only) — look at the app exactly as any teammate sees it.
- **Your name, role, and Sign out.**

The tabs

You'll only see the tabs that apply to your role. Here's what each one is for:

Tab	What it's for
Submit a Request	Log something new — a counter request, a field call, a tech case, a lead, a project, or a recurring visit.
My Submissions	Everything you personally submitted, and how it's progressing.
Sales Dashboard	The cards you own, with quick actions and follow-up tracking.
Calendar	Your work laid out by day — what happened, and what's coming up.
Manager View	The whole team's picture: what needs attention, and how things are moving.
Reports	Time, customers, activity, outcomes and tech — as charts or a printable table.
Admin	People, the customer and brand lists, and the ideas inbox.
Activity	A running log of what everyone's been doing.

4. Who sees what (roles)

Your role decides which tabs and buttons you see. It's set on the People card in Admin.

Role	Who	What they can do
Counter	Inside sales team	Submit customer requests and watch them progress.
Salesperson	Juan	Own and work leads and field calls; log touches; run their own time report.
Tech Support	Whitney	Log tech cases and internal support; resolve them; see tech reasons.
Manager	Stephen	Everything sales, plus the Manager View, hand out leads, and coach with private notes.
Admin	Kathleen	All of the above, plus People, uploads, ideas, and fixing records.
View only	Bob	See the whole picture — nothing to accidentally change.

A note on reasons: salespeople see sales reasons, tech support sees technical ones, and the counter and managers see both — so the right options show up for the right people.

5. The big idea: cards and touches

A card is one thing to follow up on for a customer — a request, a lead, a field call, a tech case, a project, or a recurring visit. It has the customer's details, why it exists, who owns it, and its current status.

A touch is any interaction you log against a card — a call, a visit, an email, a note. Every touch can record how many minutes it took. Touches never overwrite each other; they stack up into a history, so you (and anyone who picks the card up later) can see the whole story.

The status (New, Assigned, Contacted, Visited, Quote pending, Won, Lost, Resolved...) shows where a card is. Quick actions and logging touches move it along.

Why it matters: because time is captured on every touch, the Reports tab can show exactly where the team's hours went — without anyone filling in a separate timesheet.

6. Submitting a request (counter)

This is the inside sales team's main job in Pulse, but anyone can submit. When a customer needs a call, a visit, or technical help, capture it here and sales or tech takes it from there.

1. Go to Submit a Request.
2. Start typing the customer's name or account number — matches from the customer list pop up. Pick one and the address and phone fill in automatically (fields that auto-fill turn green).
3. Pick the branch, what they want, a reason, and how urgent it is.
4. In “What's going on?”, tell sales what you heard or saw — plain language is fine.
5. Tap Submit request.

After you submit, **find it under My Submissions**. As sales works it, you'll see plain-language progress updates and a little status tracker — so you always know what happened with the customer you flagged.

7. Salespeople: your dashboard

The Sales Dashboard is where you work the cards you own. Salespeople: this is home base.

The attention snapshot

Across the top, four boxes show what needs you right now — Due today, Overdue, Aging 5+ days, and No follow-up date. Tap any box to see just those cards. Zero across the board means you're caught up.

The new-work banner

When a ticket is assigned to you, a banner appears on every screen — not just this one — so you notice it wherever you are. Tap **View** to jump straight to those tickets. A ticket clears itself the moment you act on it (log a touch or grab it), or you can tap Dismiss.

Filters and search

- **Mine / Unassigned / Everyone** — whose cards you're looking at. “Unassigned” is the grab pile.
- **All work / Sales / Tech** — filter by the kind of work.
- **Open / New / Closed / Won / Lost** — filter by status.
- **Search** — find any customer, account, or rep fast.
- **Print** — print the current follow-up list as a checkbox sheet.

Opening a card

Tap any card to open it. You'll see the customer's details, who owns it, the full touch history, and — on the right — the tools to work it. Managers and admins can also read the private manager-notes thread here, and see customer history for that account.

Set the follow-up right here: under Owner on the left is a **Follow-up** box — pick a date, or tap a quick chip (Tomorrow, Next week...), and it saves on the spot. No need to open Log a touch just to change a date. Overdue dates show in red.

The customer's category (MultiFamily, Contractor, Hotel...) shows as a badge in the card's upper-right corner whenever it's known.

8. Logging calls, leads and touches

Quick actions (the fast way)

On an open card, the quick-action buttons each do everything in one tap: stamp today's date, set a sensible next follow-up, and log a touch. Left voicemail, Sent email, Sent text, Stopped by, and Won / Lost (or Resolved / Unresolved for tech) and Close.

Tip: pop a number in the Minutes box before you tap, and the time is logged too. Leave it blank and each action uses its usual time.

Log a touch (the detailed way)

Use “Log a touch” when you want to capture more. It's grouped into sections:

- **The touch** — what kind (call, visit, email...), the next follow-up date, and time spent.
- **What was covered** — products or lines discussed, and the information you went over.
- **Quotes & orders** — coming soon; shown greyed out with an “In progress” marker.
- **Notes** — an internal note (stays between sales) and a public summary (the person who submitted the card sees this).

Each save adds a new entry to the timeline — it never overwrites an earlier one.

Logging a field call

Just visited or called a customer? On Submit a Request, use the Field call (or Tech call) mode. It captures the contact, assigns the card to you, and logs the first touch with time — all in one go.

Handing work to someone (leads and referrals)

Managers can raise a Lead and put someone's name on it — it lands on their board as new work, with nothing logged against the manager and no time recorded. Salespeople and tech can Refer work across to each other the same way (a rep sends a technical issue to tech; tech sends a sales opening to a rep).

Primary brand & contractor

- **Primary brand** — an optional field on most tickets for what a customer mainly installs (Carrier, Trane, Lennox...), with an “Other” option.
- **Contractor** — on multifamily (MF) properties, an optional field appears to tag the contractor who services them. Start typing to pull them from the customer list.

My Submissions vs the Sales Dashboard

They're not the same list. My Submissions is everything you created. The Sales Dashboard is everything you own. They differ when a lead is handed to you (you own it but didn't submit it), or when you submit something that goes to someone else.

9. The calendar

The Calendar tab lays your work out by day, in two modes:

- **Activity** — what actually happened, plotted by the day it was logged, with time totals. Blue is sales, orange is tech.
- **Follow-ups** — what's coming up, placed by each card's follow-up date.

Tap any customer — a chip or a day row — to open that card directly. Tap a day number to open the day view, and use **Print this day** for a checkbox route sheet with names, addresses and what to do. You can filter by person and switch month or day at the top.

10. Tech support

Whitney works tech cases alongside sales, on the same board — they just get resolved rather than won or lost.

Logging a tech case

On Submit a Request, the Tech call mode captures the manufacturer, model, serial and case number, plus the issue (what's failing, error codes, what's been tried). It runs through the same pipeline, assigned to you and ready to follow up. Close a case with Resolved or Unresolved.

Internal support (helping our own team)

Helped a salesperson, the counter, or a branch rather than an outside customer? Use the **Internal support** mode. Put down who you helped, what they needed, and the time it took. It's tracked as tech work — so your internal load shows up in the reports too — and carries an “Internal” badge on the board.

Refer to sales

Heard a sales opening on a tech call? Refer it to sales rather than logging a sales call you didn't make.

11. Managers

The Manager View is Stephen's command center — the whole team at a glance.

- **Needs attention right now** — Unassigned, Overdue follow-ups, Aging 5+ days, and No follow-up date. Tap any to drill in. Zero across the board is a healthy shop.
- **The numbers** — total submitted, open items, won, average response time, and deal flow (some money figures are marked “In progress” while that feature is finished).
- **Submission Summary** — where leads come from, by branch and by person, and counter vs field.
- **Open items, oldest first** — anything red has been sitting more than five days.
- **Manager notes** — leave a private note on a lead that only sales sees (never the submitter). You'll see which notes are still awaiting a reply.
- **Projects & recurring visits** — monitor long jobs and set customers on a repeating visit cadence.

Assigning work: open any card and use the Owner dropdown, or raise a Lead from the submit screen and put someone's name on it.

12. Reports

Reports turn all those touches and cards into a picture. Salespeople see their own time; managers and admins see everything and can pick any person.

Report	What it tells you
Time	Hours logged, by day, by person, and by customer — plus sales vs technical.
Customers	Who's getting attention, directory coverage, and customers showing warning signs.
Activity	What's coming in, what kind of work it is, and where it's landing.
Outcomes	Win rate, resolve rate, response time, and how long work takes to close.
Tech	Open cases, resolve time, and cases by manufacturer.

Every report filters by **person and date range** (there are quick 7-day and 30-day buttons), and you can flip between charts and a printable table. Use Print for a clean copy.

13. Admin

The Admin tab is for Kathleen — the team, the data lists, and the ideas inbox.

People & roles

Add a teammate, set their role, and give them the email they'll sign in with. Deactivate someone to hide them but keep their history; remove them to take them off entirely (cards they owned keep their name).

Note: adding someone here sets their role and identity in Pulse. Creating the actual login is a separate admin step — the person's email here must match the email on their login exactly.

Customer list

Upload the **ARW All Customers** report (a CSV) to replace the whole customer directory (it powers the autocomplete everywhere). A header row is fine. Recognised columns:

Column	Notes
Name	Required — the customer name.
Account #	Account or acct number.
Address 1 / 2, City, State, Zip	Full address — shows on cards and route sheets.
Phone	Contact number.
Category	Segment code from the ERP (MF, CO, HO...). Shown spelled out on the card, and MultiFamily switches on the contractor field.

After uploading, **each customer's category is captured** and shown as a badge (spelled out — MF reads “MultiFamily”) when you pick that customer.

Manufacturer list

Upload the **ARW Inventory Vendors** report — a one-column CSV of brand names — to fill the Manufacturer dropdown on tech cases. Duplicates are dropped automatically.

Ideas & problems

Everything the team sends from the 💡 button lands here. Set each one to New, Planned, Done, or Not now. When you mark one Done it's stamped with the version it shipped in (a “shipped v#” tag the team can see),

and it tucks into a collapsible Done • archived section so your active list stays clean — tap to expand it any time. Credit the person in What's new — that's what makes a second idea happen.

Fixing records

- **Edit a touch** — on any entry in a card's history, tap Edit to fix the touch type (say, Visit → Call), the note, the public summary, or the time. Admin only.
- **Remove a touch** — delete a touch that landed on the wrong card.
- **Delete a card** — at the bottom of a card; removes it and its whole history, and can't be undone.
- **Preview as...** — from the header, see exactly what any teammate sees (read-only).

14. Ideas, tips and what's new

-  **Idea** — tap it in the header any time. One box; it already knows who you are and what screen you were on. Small ideas are the best ones — an extra tap you keep making, a button in the wrong place.
- **Tip of the week** — a short spotlight on a feature pops up when you sign in, at most once a week. Tap “Another tip” to browse more, or “Got it” to carry on. Just-launched features show first for a couple of weeks.
- **What's new** — tap the version pill in the header to see the full history of changes, and who asked for them.

15. If something looks off

You see...	Try this
“Offline”, or the screen seems frozen	Tap Refresh (top of most tabs), or reload the page. Your data is safe on the server.
Numbers or cards look out of date	Tap Refresh to pull the latest from the database.
Can't sign in	Use “Forgot your password?”, or ask Kathleen to check your account.
A customer won't autocomplete	They may not be in the current customer list — type the details in by hand, and let an admin know.
Something's genuinely broken	Tap  , choose “Something's broken,” and describe it. It logs where you were automatically.

16. Quick glossary

Term	Means
Card	One request, lead, call, case, project or recurring visit for a customer.
Touch	A single logged interaction on a card — a call, visit, email or note, with optional time.
Lead	Work a manager hands to someone; lands on their board with no call logged.
Referral	Work handed sideways — sales to tech, or tech to sales.
Field call	A visit or call a rep logs, which also records the first touch and time.
Internal support	Tech help given to our own team rather than an outside customer.
Primary brand	What a customer mainly installs (Carrier, Trane...) — optional intel on a ticket.
Customer category	The segment a customer belongs to, from the ARW All Customers report (MultiFamily, Contractor, Hotel...). Shown as a badge on the card.
MF / MultiFamily	A customer category (hotels, apartments) — the one that switches on the contractor field.
Status	Where a card is: New, Assigned, Contacted, Won, Resolved, and so on.
Public summary	The plain-language note the submitter sees; internal notes stay with sales.
