User Guide

Covers version 3.26 · works on phone, tablet and computer · no installing anything

Last updated August 15, 2026

What Customer Pulse is

It's the shared place to track everything you do with a customer — a counter request, a phone call, a site or showroom visit, a quote, a tech-support case, a lead, a project, or a recurring visit. Everything becomes a card that moves through simple stages, so nothing falls through the cracks and anyone who picks it up later can see the whole story.

Signing in

Open pulse.myjohnstonesupplygroup.com and sign in with your work email and password. Forgot it? Tap “Forgot your password?” on the sign-in screen and follow the email. The app keeps you signed in — if a tab sits idle, it quietly refreshes so your next save still works.

Finding your way around

The tabs across the top change with your role. Most people live on the Sales Dashboard. Managers and admins also get Manager View and Pulse. Everyone has Reports (except counter staff), the 💡 idea lightbulb, and the 📖 Guide.

Cards, stages and touches

Every card shows a stage (its status) and its latest touch type (what was last done). A touch is any interaction you log — what you did — and touches stack into a history; they never overwrite each other. Your typing is held safely on your device until a touch saves, so a note is never lost.

Stage	What it means
New / Assigned	Just arrived, or handed to a rep.
In progress	Being actively worked.
Quoting	A quote is out.
Waiting on info	Waiting on the customer or a manufacturer.
Won / Lost	Closed sale — with an optional “why?”.
Resolved / Unresolved	Closed tech case.
No action needed	Set aside; reversible any time.

Quick log — the fastest way

See the lightning bolt in the top corner of an open card? Tap it to log a touch without opening the card: pick what you did, add a note (one-tap phrases like “Left voicemail” are right there), optionally minutes, and it even suggests your next follow-up. Save and you’re done.

Logging a full touch

Open a card for the full form when you want quote numbers, values, products, or a public summary. The note field has the same one-tap phrases, and the next follow-up is pre-filled a few business days out so cards don’t drift into the “no follow-up” pile. You can always change or clear it.

Staying on top of things — attention

The app watches how long a card has gone without being worked (working it resets the clock; a card with a future follow-up counts as scheduled, not aging). It flags three levels:

- Needs a nudge — untouched about a week.
- Going cold — about two weeks.
- Cold — review — the longest untouched; tap the Cold box for a quick list where you can Close or Snooze a week in one tap.

Brand-new cards that were never touched show “Awaiting 1st touch,” and follow-ups past their date show how many days overdue. Your dashboard snapshot boxes jump you straight to each pile.

Search and filters

Search finds a customer, account, rep, or words in the notes — a match in the write-up or a touch note shows a highlighted snippet on the card. The filter chips narrow to Mine/Everyone/Unassigned and by stage.

Submitting a request or lead

Pick the customer and their name, account, phone and address fill in automatically. Add the reason and submit. If that customer already has an open card, you’ll get a heads-up first — open the existing card, or create a new one anyway — so the board doesn’t fill with duplicates.

Marking Won or Lost

When a card is Won, Lost or Unresolved, a quick “Why?” box appears — a few words on what won or lost the deal. It’s optional, but it makes the Outcomes report genuinely useful for spotting patterns.

Reports

Under Reports: Time, Customers, Activity, Outcomes (win/resolve rates, how long things take, and the top won/lost reasons), and Tech. Each can be printed to a clean PDF.

Pulse — for managers and admins

Pulse is the health of the whole board at a glance:

- Snapshot: open, awaiting-first-touch, cold, unassigned, unanswered manager notes, no-follow-up, median response, and the first-touch SLA hit-rate.
- Trends — this week vs last: opened, closed, response time and win rate, each with a green/red direction arrow.
- Throughput over eight weeks, and the aging spread.
- Stuck in a stage — cards sitting in the same stage two weeks or more.
- Manager notes awaiting a reply — longest waiting first.
- Rep scorecards — each person's current load plus their touches, closes and wins over the last 30 days.

Ideas and tips

Tap the 💡 lightbulb any time something annoys you or an idea strikes. Ideas land in an inbox; when one gets built, you're credited in the What's-new panel behind the version pill.

For admins

Admin holds people & roles, the customer and manufacturer uploads, and settings: the attention thresholds and first-touch SLA target (Attention & aging), the Weekly digest recipients, and — under Security — “Sign out everyone” for when a laptop goes missing or someone leaves. Admins can also Preview as... any person to see exactly what they see.

Getting help

The 📖 Guide link (this document) sits in the header on every screen, next to the version and the idea lightbulb. If something's wrong, the fastest fix is the 💡 lightbulb — it comes straight to the person who maintains the app.
